

WEDGES (WS)

Safe transport of products with multiple configurations

What are they and what do they do?

Inprosy wedges are sets of two confronted conveyors that allow the transport of products in any direction and orientation, with their lateral support.

These devices handle products firmly but delicately and are suitable for a wide range of sizes and shapes (bottles, cans, industrial components, etc...).

Inprosy wedges are fully configurable and adaptable to customer needs.

WEDGES (WS)

Technical details:

- Speeds up to 60 m/min
- Firm, soft side grip
- Size of products transported: variable according to stability and weight
- Shape of the products transported: boxes, flowpacks, bags, tubes, bottles, cans, doypacks, etc...
- Control software fully integrated with manufacturing line
- Made from stainless steel or aluminium
- Power required: depending on the distance and characteristics of the circuit
- Lubrication: Recommended
- CE-marked
