

## CONVEYORS

*Continuous transport of all types of products*

- Multi-product and multi-speed conveyors
- Fully configurable
- Configurable with other Inprosy solutions or those of other manufacturers

# CONVEYORS

## What are they and what do they contribute?

Inprosy conveyors facilitate management and handling of products in factories and storage facilities.

**Inprosy can offer almost any product transport solution**, from straight small length conveyors to complete transport circuits designed to avoid obstacles and raise or lower products.

Inprosy conveyors are designed to adapt perfectly to customer needs, including the products to be transported, speeds, environmental conditions, available space, etc. **As such, Inprosy's offer ranges from simple or standard conveyors to solutions designed specifically for the customer, through adaptations of existing solutions.**

Inprosy conveyors are perfectly configurable with the other solutions in its product catalogue and can also be connected to pre-existing product management solutions in the customer's factory or warehouse.

## Technical characteristics:

- Speeds up to 80 m/min
- Continuous transport
- Different chain, band or tape formats
- Size of the transported products: variable according to stability and weight
- Zero Line Pressure transport between products
- Installation at ground level or at height
- Entry and exit of products at the same height or at different levels
- Control integrated with the line
- Construction in stainless steel or other materials
- Electricity consumption: Depending on the distance and characteristics of the circuit
- Safety requirements according to EU regulations
